

# Practicalities and analysis of using PTP over 5G systems with dedicated time synchronization support for media production

Presenting: Ievgen Kostiukevych (EBU), Pavlo Kondratenko (EBU)

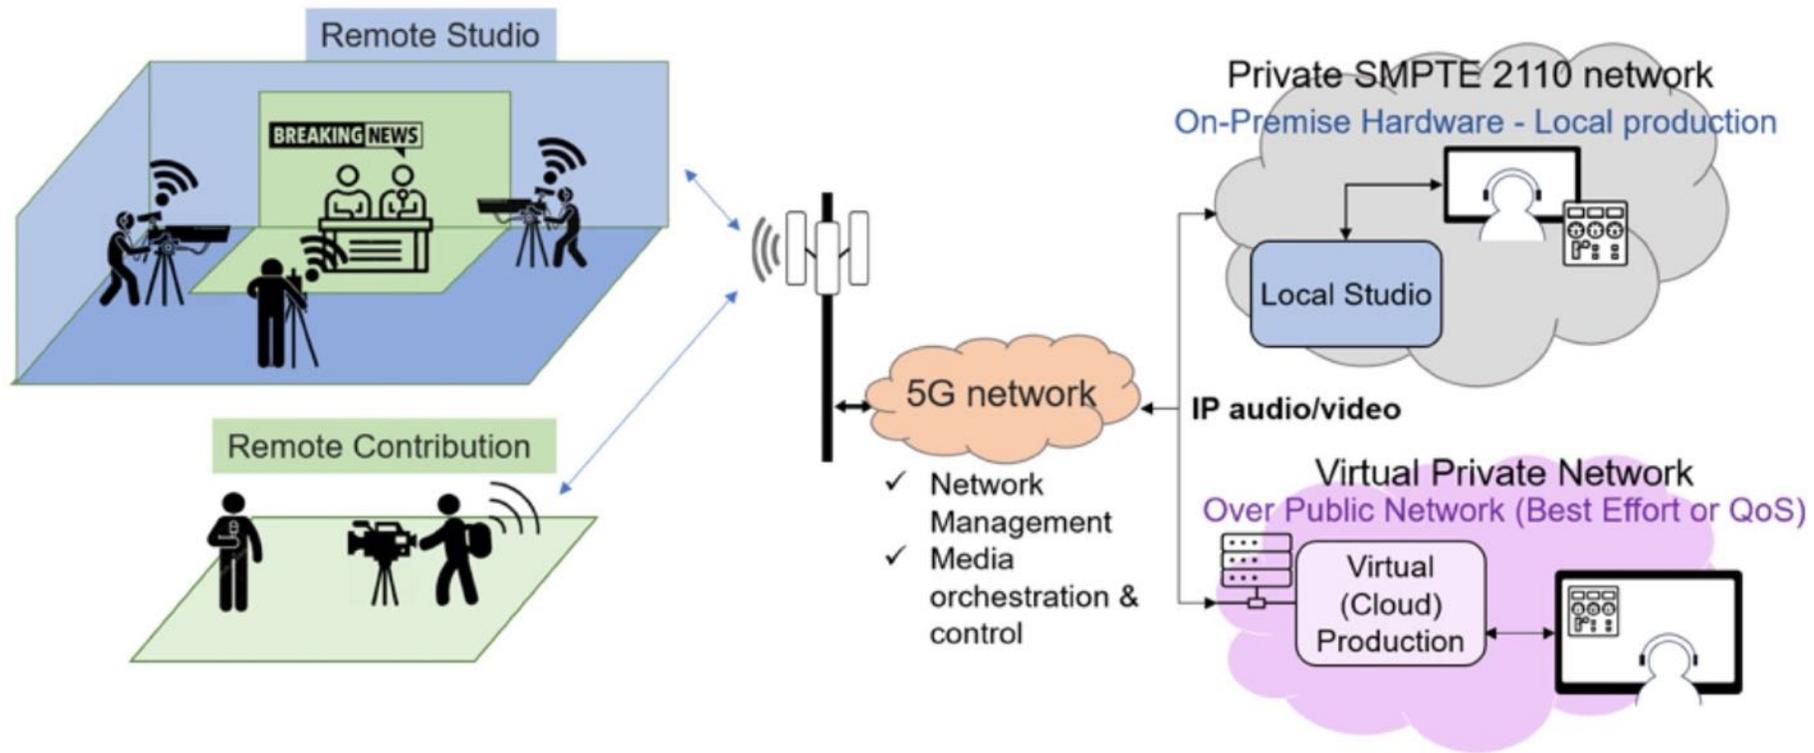

Co-Authors: Thorsten Lohmar (Ericsson), Mohamed Nabil Ibrahim (Ericsson), Thomas Kernen (NVIDIA)

# About 5G RECORDS

# About UC2

# Problem Statement

- How do we synchronize multiple wireless cameras?
- PTP vs NTP vs SIB9
- PTP is already used for ST 2110 on the wired side
- Will PTP work over 5G at all?
- What accuracy is good enough?
- Unicast/Multicast

# PTP without correction field

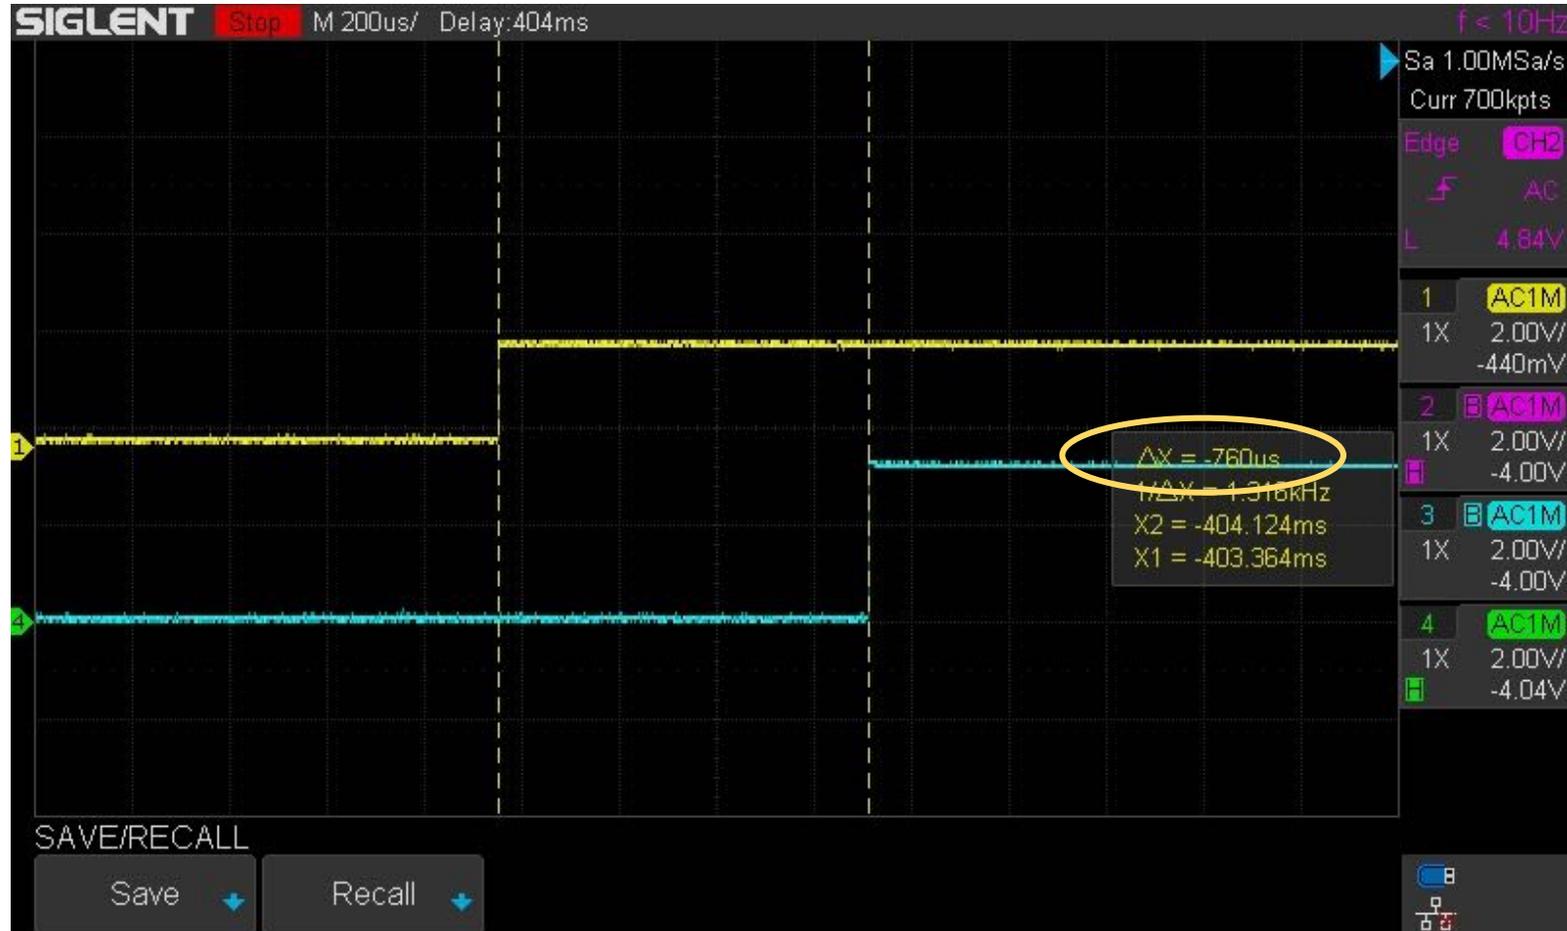

The image shows a Wireshark capture of Precision Time Protocol (PTP) messages. The main pane displays a list of captured packets, with the selected packet (No. 96453) highlighted in blue. The packet details pane shows the structure of the PTP message, with the 'correction' field circled in green. The correction field is set to 0 nanoseconds, indicating that no correction is being applied.

```

- PTP is vulnerable to path asymmetry
- Any constant asymmetry will produce a time offset equal to half of the differential delay.
- Dynamic asymmetries will generate unpredictable errors thus impairing the synchronization precision
- Correction fields can be used by the TC to mitigate this

# Without Correction (PPS)

# Static Correction

- Here, the correction field is manually inserted, using the delayAsymmetry property of ptp4l
- This can be used to fix constant asymmetry

- Ericsson URLLC system can detect PTP packets and use the correction fields to signal residence time, thus acting as a TC

# Experiment setup

# URLLC test network (Rel. 16 + 17 features)

<b>Location</b>	Ericsson Aachen
<b>Setup type</b>	Portable indoor setup (OTA)
<b>Core</b>	NR-SA (Rel. 16 + 17)
<b>Supported band</b>	mmW (28GHz): 27.5-28.3 GHz
<b>Available bandwidth</b>	1-2x 100MHz
<b>MIMO support</b>	2DL/2 UL
<b>Features</b>	TSN 2ms RTT URLLC slice vs eMBB

gNodeB

UE

# Hardware components

Nvidia Mellanox ConnectX6 DX

- Dual 100 Gbps interface
- Supports high (single nanosecond) PTP precession
- Outputs PPS signal

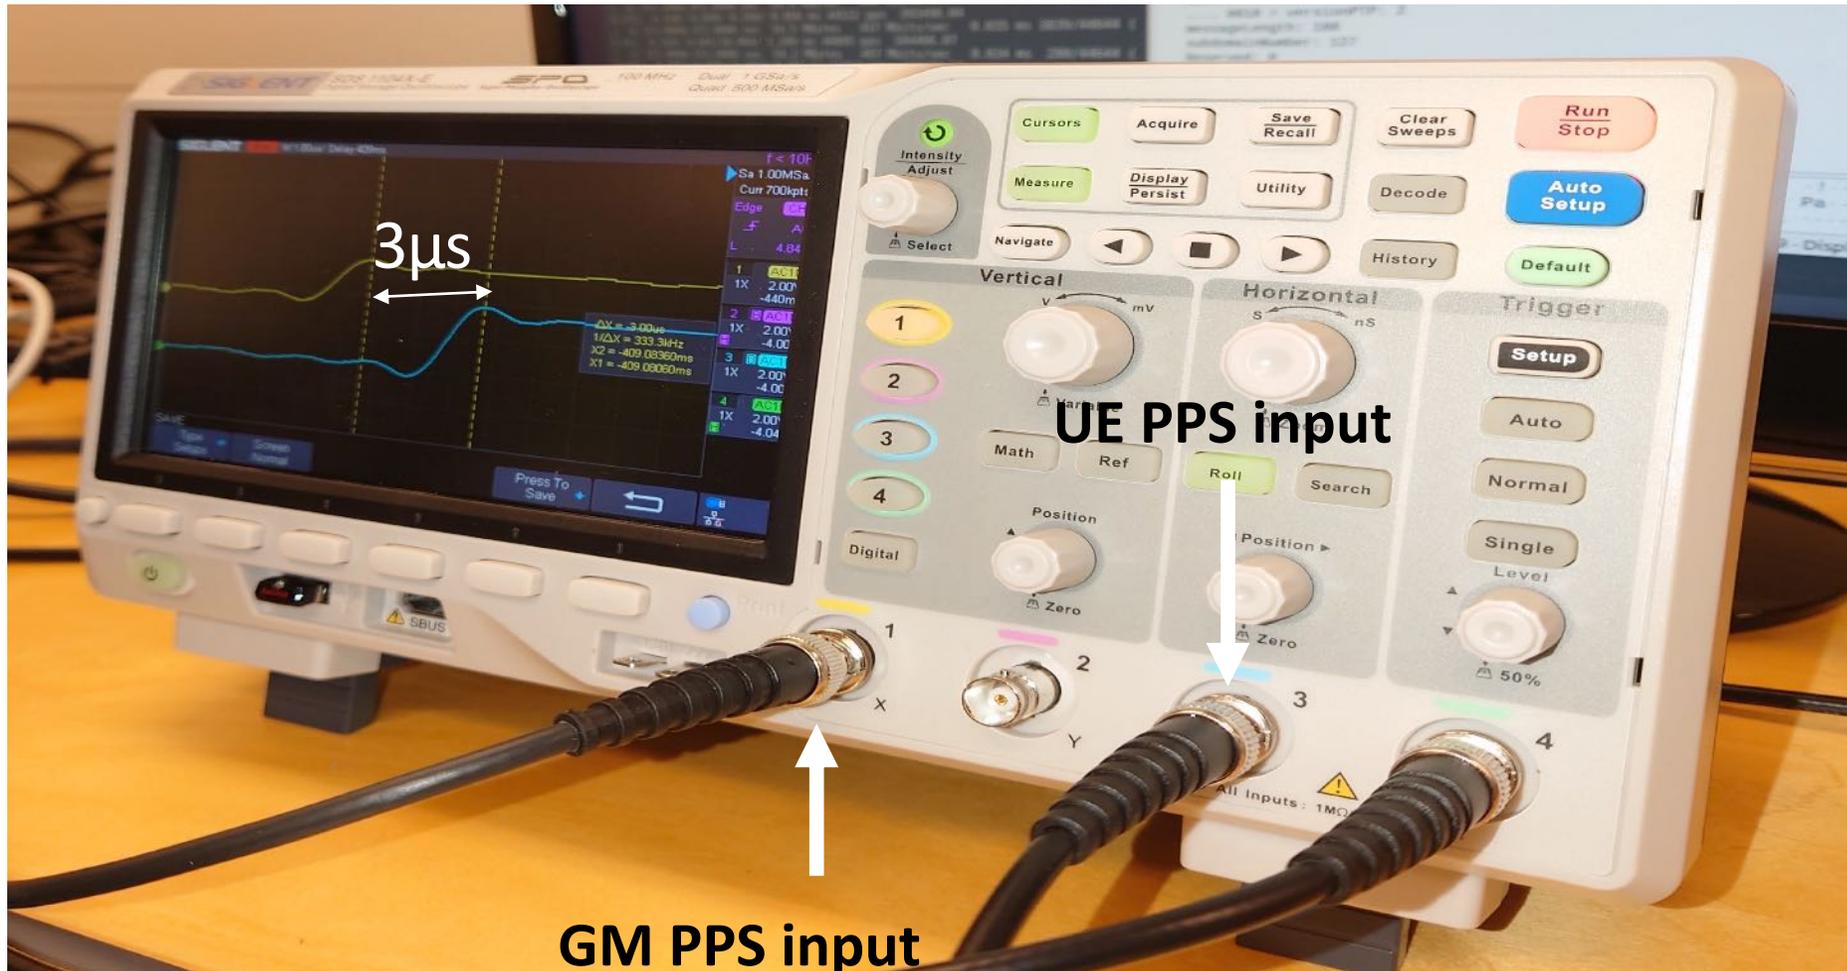

Nvidia SN 2010  
Ethernet switch

Tektroniks SPG8000a

- PTP (IEEE 1588-2008)
- SMPTE ST 2059-2 profile in Unicast mode

# Oscilloscope measurements

# Test 1: Measurements without timing assistance or PTP client's parameters tweaking

The general parameters of the test:

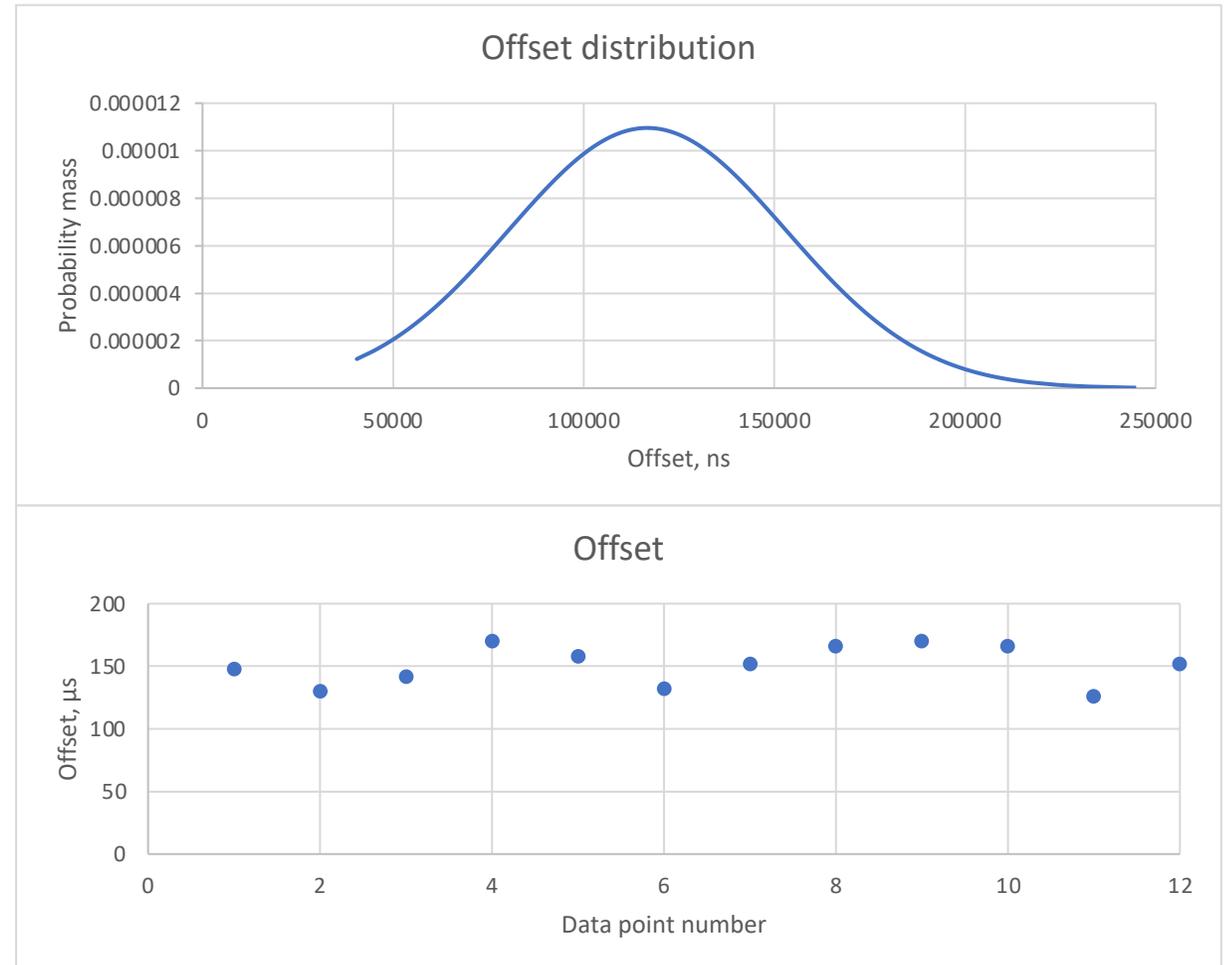

- Residence time provided: No
- PTP servo used: Linear regression
- Advanced servo parameters tweaking: No
- Number of data points: 1577

The main results are the following:

- Average PTP accuracy: 116653 ns ( $\sim 117 \mu\text{s}$ )
- Median PTP accuracy: 116036 ns ( $\sim 117 \mu\text{s}$ )

PPS measurements results:

- Number of data points: 12
- Average offset: 152  $\mu\text{s}$

# Test 2: Measurements with timing assistance and PTP client's parameters tweaking

The general parameters of the test:

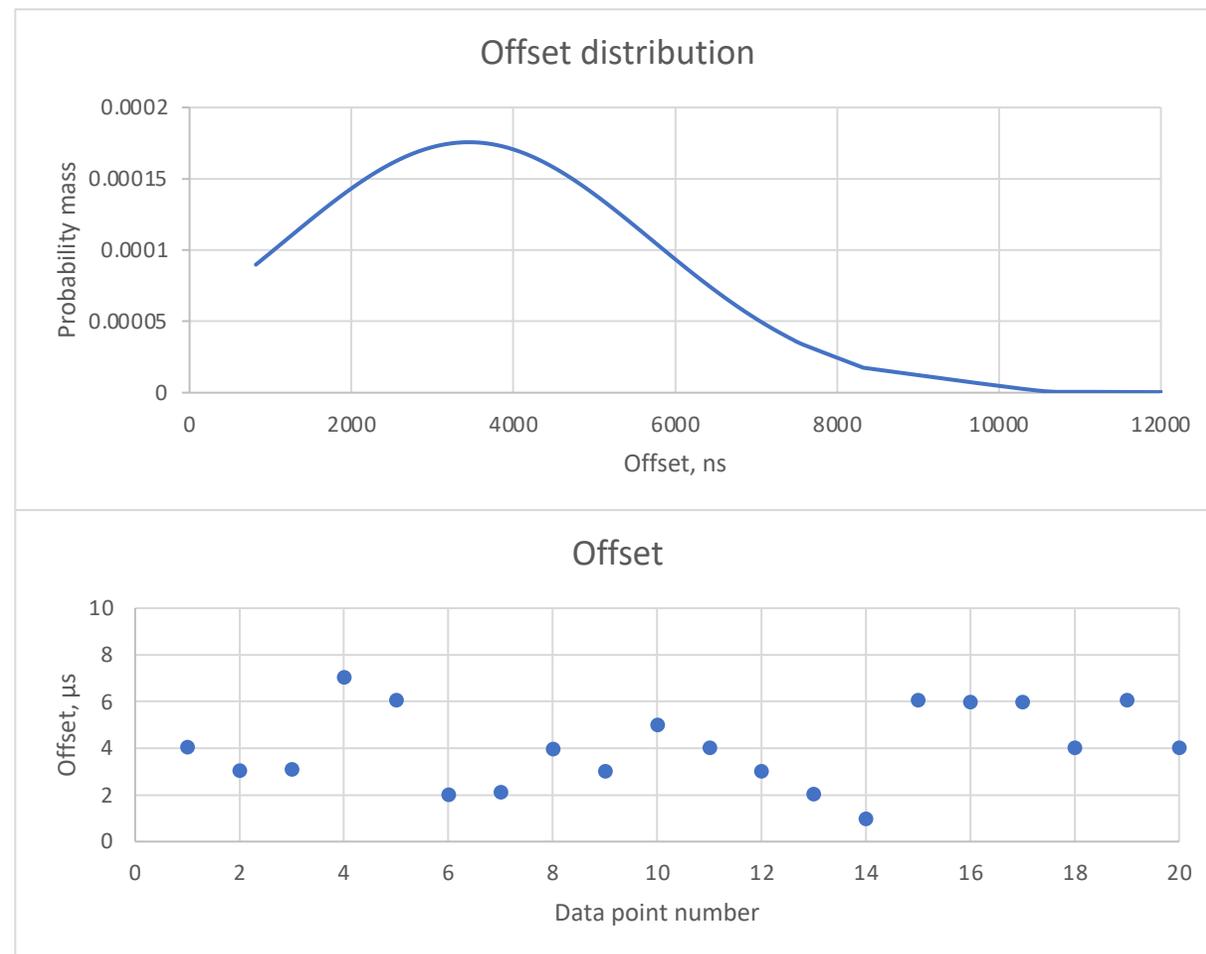

- Residence time provided: Yes
- PTP servo used: PI
- Advanced servo parameters tweaking: Yes
- Number of data points: 932

The main results are the following:

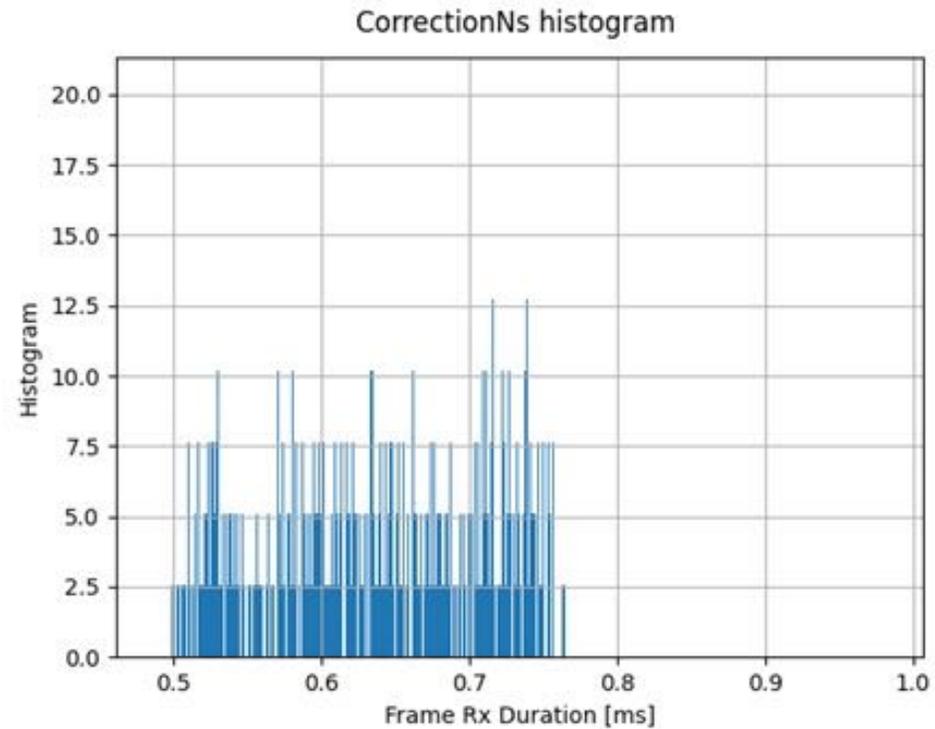

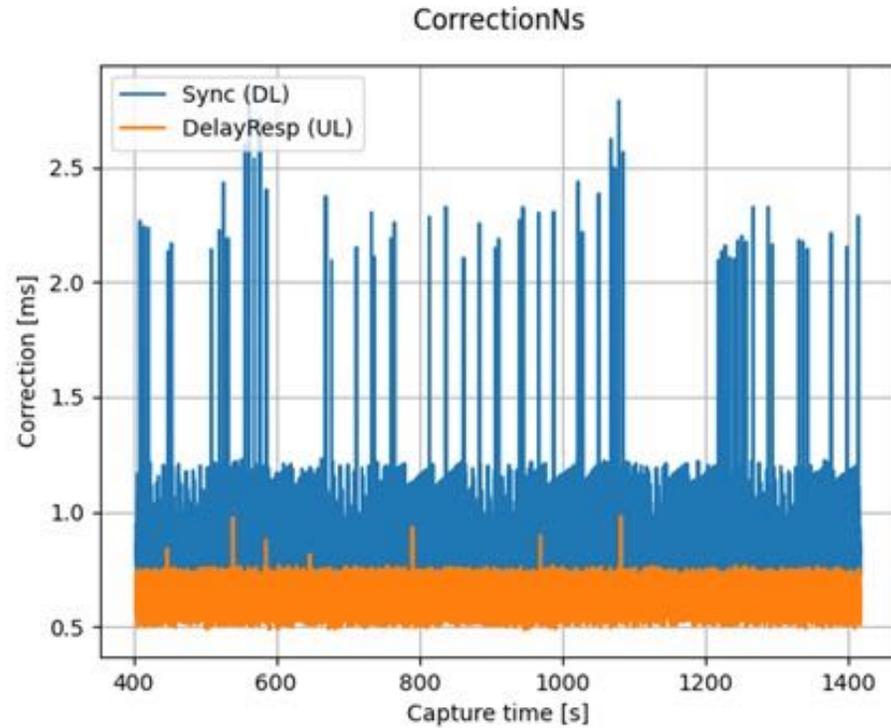

- Average PTP accuracy: 3451 ns ( $\sim 3,5 \mu\text{s}$ )
- Median PTP accuracy: 2832 ns ( $\sim 2,8 \mu\text{s}$ )

PPS measurements results:

- Number of data points: 20
- Average offset: 4,066  $\mu\text{s}$

# Test 2: Measurements with timing assistance and PTP client's parameters tweaking

Residence time and a histogram of residence time reported by the testbed in correction fields over time for Test 2

# Test 3: Measurements with timing assistance but no PTP client's parameters tweaking

The general parameters of the test:

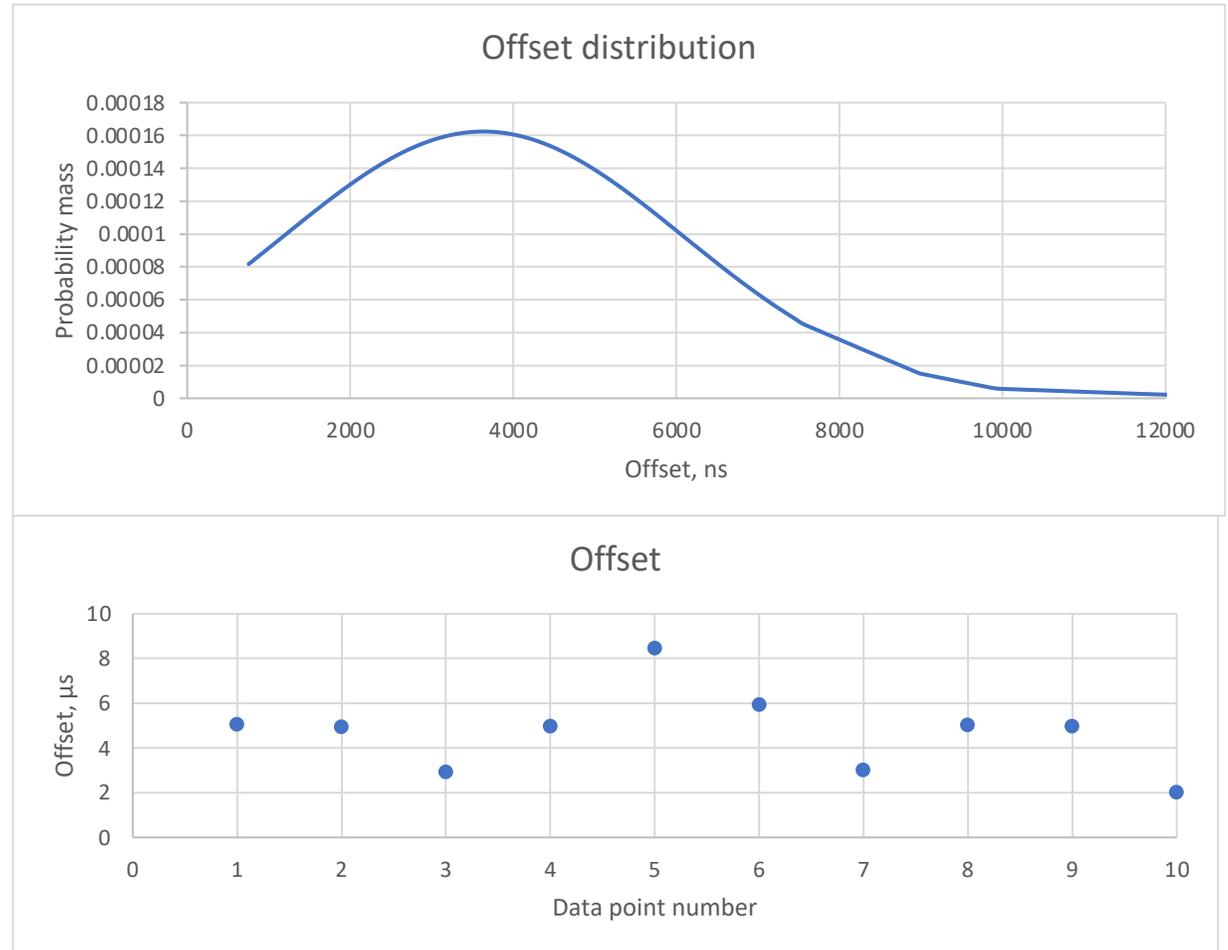

- Residence time provided: Yes
- PTP servo used: Linear regression
- Advanced servo parameters tweaking: No
- Number of data points: 449

The main results are the following:

- Average PTP accuracy: 3633 ns ( $\sim 3,6 \mu\text{s}$ )
- Median PTP accuracy: 3106 ns ( $\sim 3,1 \mu\text{s}$ )

PPS measurements results:

- Number of data points: 10
- Average offset: 4,756  $\mu\text{s}$

# Test 4: Measurements under load - in the presence of network congestion

The general parameters of the test:

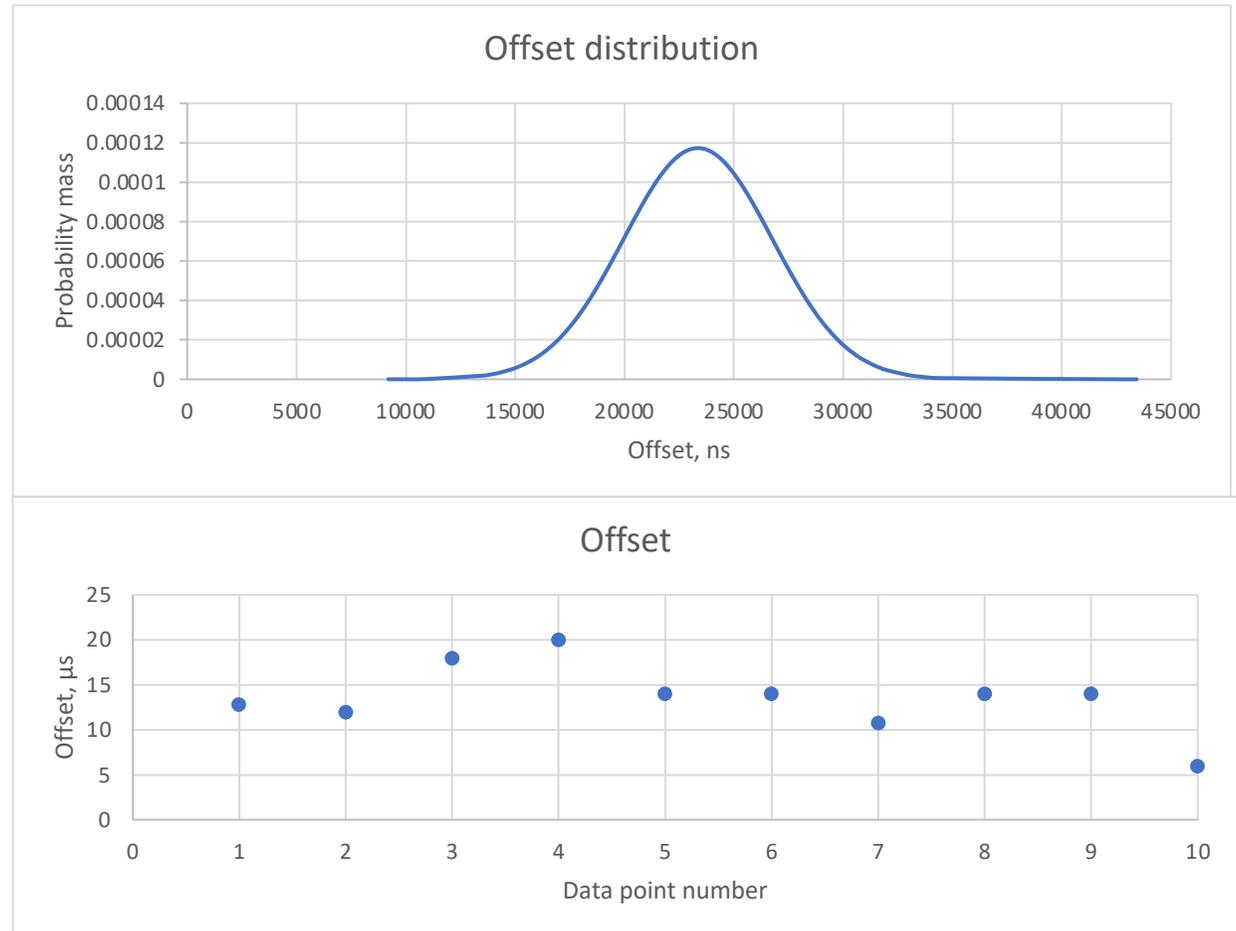

- Residence time provided: Yes
- PTP servo used: Linear regression
- Advanced servo parameters tweaking: No
- Number of data points: 737

The main results are the following:

- Average PTP accuracy: 23358 ns (~23,4  $\mu$ s)
- Median PTP accuracy: 23350 ns (~23,4  $\mu$ s)

PPS measurements results.

- Number of data points: 10
- Average offset: 13,56  $\mu$ s

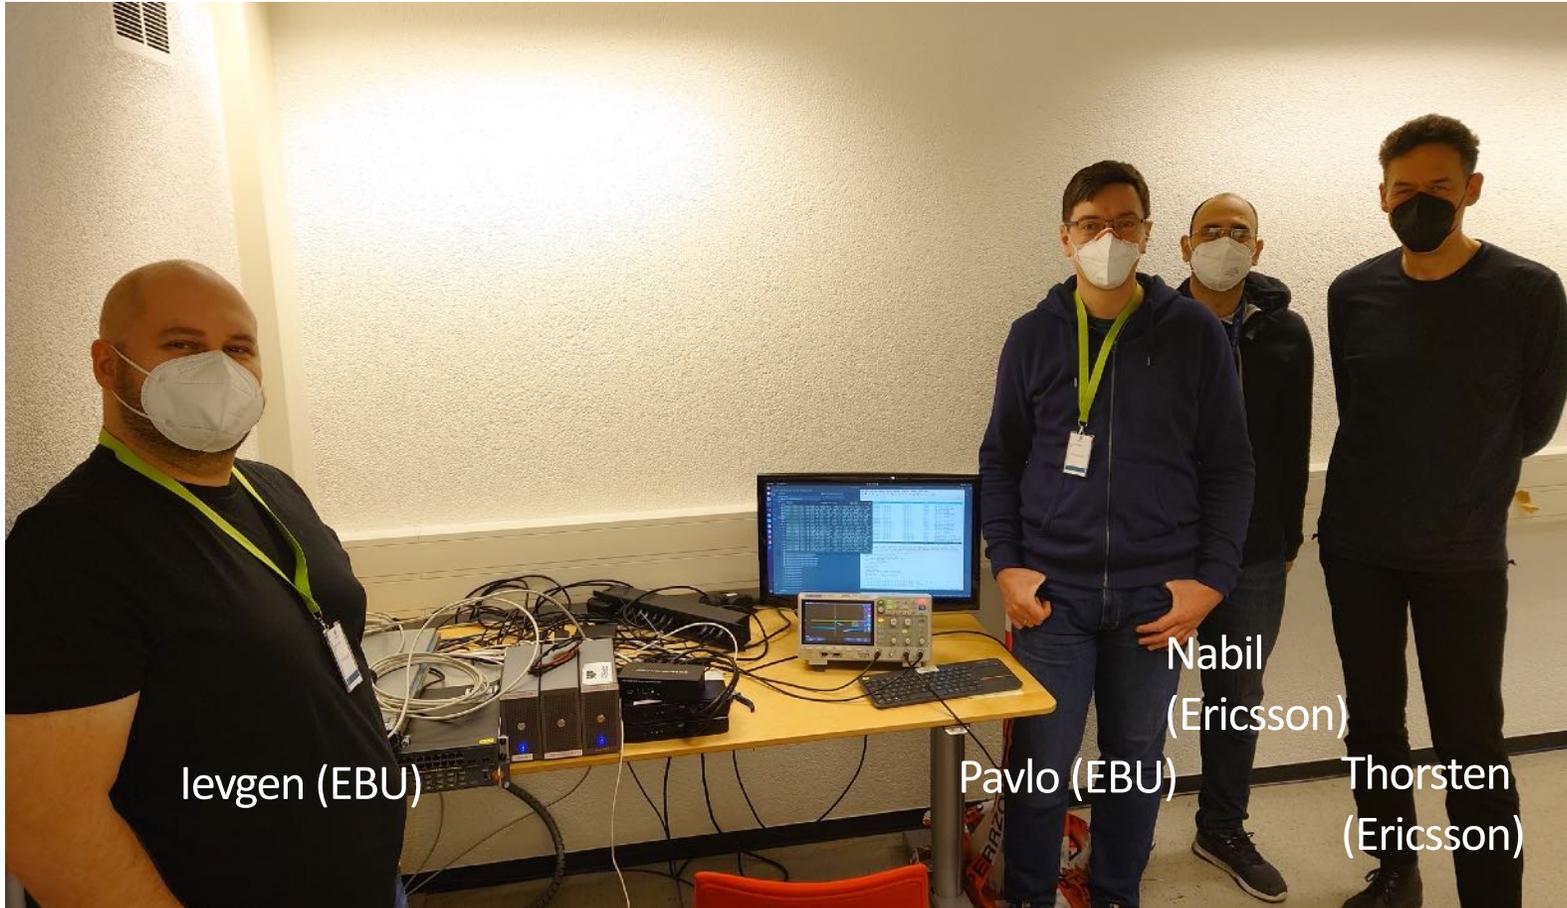

# Conclusions

- Synchronization accuracy of less than 4  $\mu\text{s}$  can be achieved with residence time measured and reported by the 5G system compared to  $\sim 120\text{-}150 \mu\text{s}$  achieved with the TSN features disabled
- In the presence of network congestion of 80-90% of available bandwidth the accuracy degrades to  $\sim 24 \mu\text{s}$
