

# 5G RECORDS

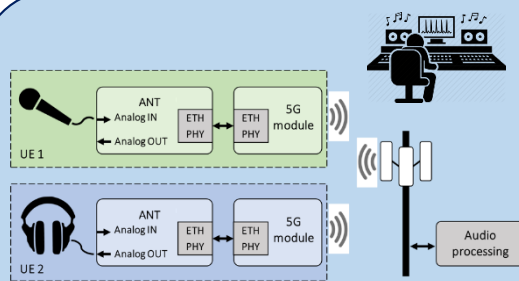

---

## 5G key technology enablers for emerging media content production services

*ICT-42-2020*

*5G core technologies innovation*

**5G  
RECORDS**

- Open and Virtualised RAN
- NR-RedCap & URLLC
- Software Defined Radio
- Dynamic Spectrum Access

of 5G components for professional content production

of state-of-the-art 5G  
prototypes

into end-to-end 5G  
infrastructures

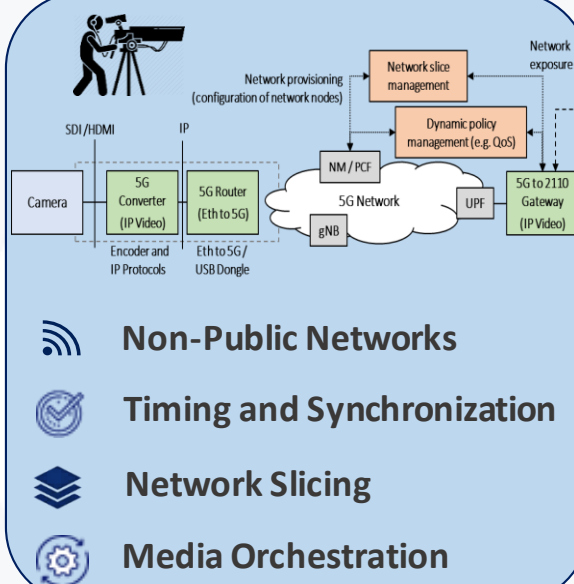

in the context of real  
production use cases

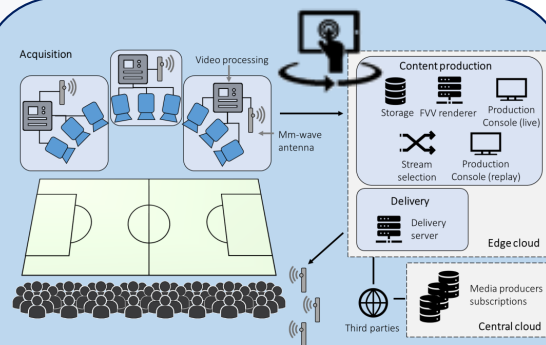

of the potential value for  
the sector

**SG

countries

x18  
partners

# Use case Live audio production

- **Main partners:**

- In a live audio production setup (e.g. music concerts, music festivals, TV shows), the artists are equipped with professional Programme Making and Special Events (**PMSE**) equipment

- 5G wireless **microphones**
- In-Ear Monitor (**IEM**) systems
- **Control tools** and gateways between 5G and traditional audio infrastructure domains.

- **4 main areas of work:**

- Capturing of live audio data
- Temporary spectrum access
- Automatic setup of wireless equipment
- Use of a local NPN

- **Requirements:**

- End-to-end delay < 4 ms
- User data rate ~500 kbps
- Synchronization of all audio sources  $\pm 500$  ns

# Use case live immersive media

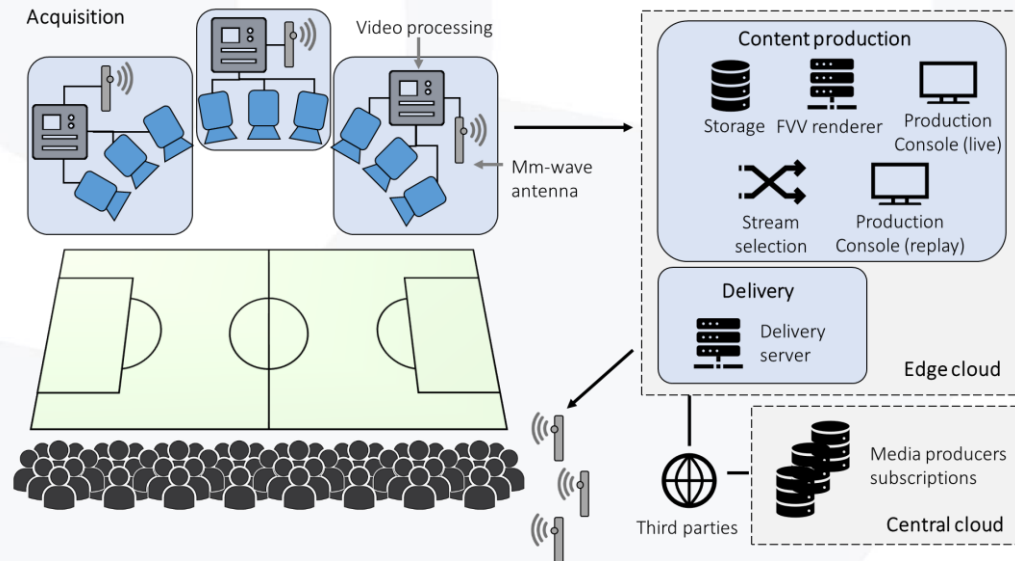

- **Main partners:** **NOKIA** *Telefonica*     
*leader*
- Real-time end-to-end free-viewpoint video (**FVV**) system that includes capturing, 5G contribution, virtual view synthesis on an edge server, 5G delivery and visualization on user terminals.
- The 5G connectivity allows a portable FVV system to operate in real time with reduced deployment cost and high flexibility.

- **Video workflow in 3 stages:**

- Capturing.
- Encoding and transmission.
- Synthesis and visualization.

- **Requirements:**

- Media acquisition: up to 1.5 Gbps per camera.
- Radio uplink speeds of 20-200 Mbps.
- Downlink speeds of 2-20 Mbps per user.
- Connected end-users: 10-100 per 1000 m<sup>2</sup>.
- Reliability: 1 error every 10 min.

# Use case Multiple camera wireless studio

Main partners:

LiveU EBU

BBC

Rai

Fivecomm

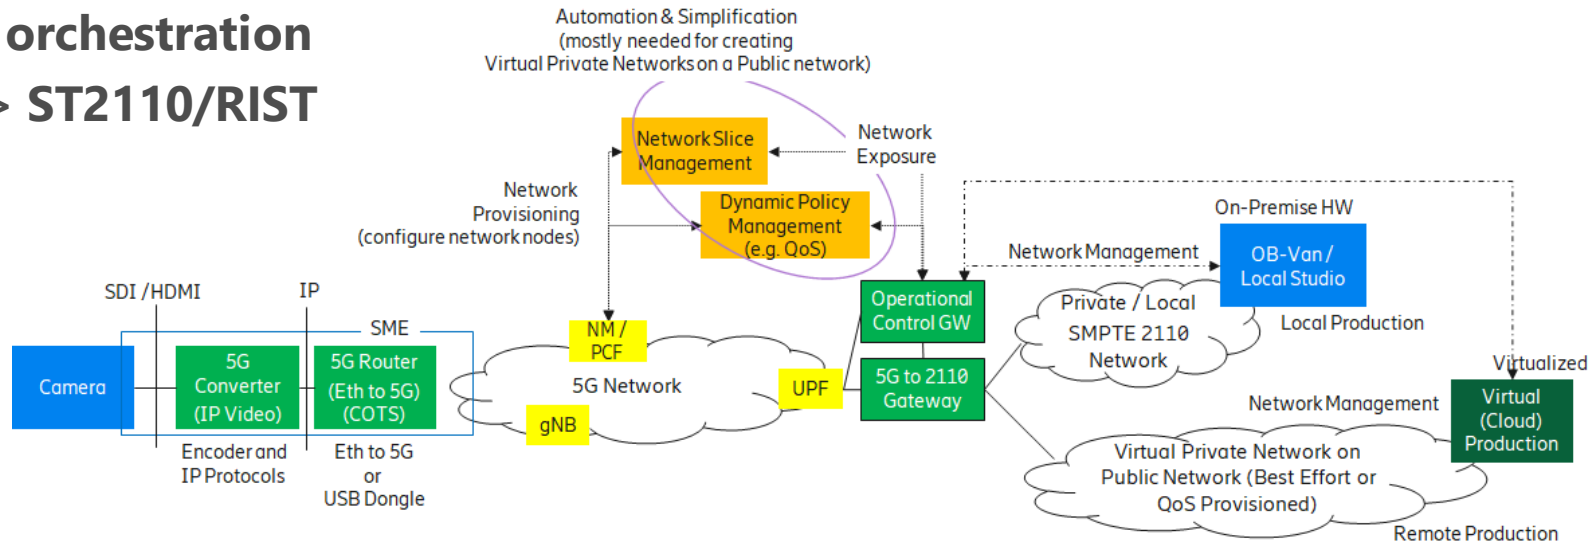

UNIVERSITAT  
POLITÉCNICA  
DE VALÈNCIA

- The best of an **IP studio** combined with the super-fast and highly reliable wireless 5G connections
- 5G will facilitate new types of workflows addressing 3 core requirements:
  - Flexibility and reduction cost in setting up productions
  - Scalability from small to large events
  - Shareability of content along the production chain and between creative stages
- **2 sub use-cases:**
  1. Multiple cameras (~5) in a wireless studio. Wired/wireless functionalities will be combined using a fully IP system
  2. Outdoor production scenario with 2 or more 5G-enabled cameras and sound capture devices connected to NPN

# UC2 Multiple wireless camera - Components

- Non-public networks
- Timing and synchronization
- Network slicing
- Media orchestration
- 5G <-> ST2110/RIST

# Professional content production today

Sport events, newsgathering, etc

---

- DVB-T based transmitter:
  - Bandwidth: 30/40Mbps
  - Latency:  $\geq 20\text{ms}$
  - UHF link for the «camera» controls
- Bonded cellular systems:
  - Bandwidth: depends from the number of aggregated modems; 30-70 Mbps
  - Latency:  $\geq 600\text{ms}-1\text{s}$
  - Some of them capable to deal with return video, tally and intercom (separate solutions)
  - Plug & Play solutions

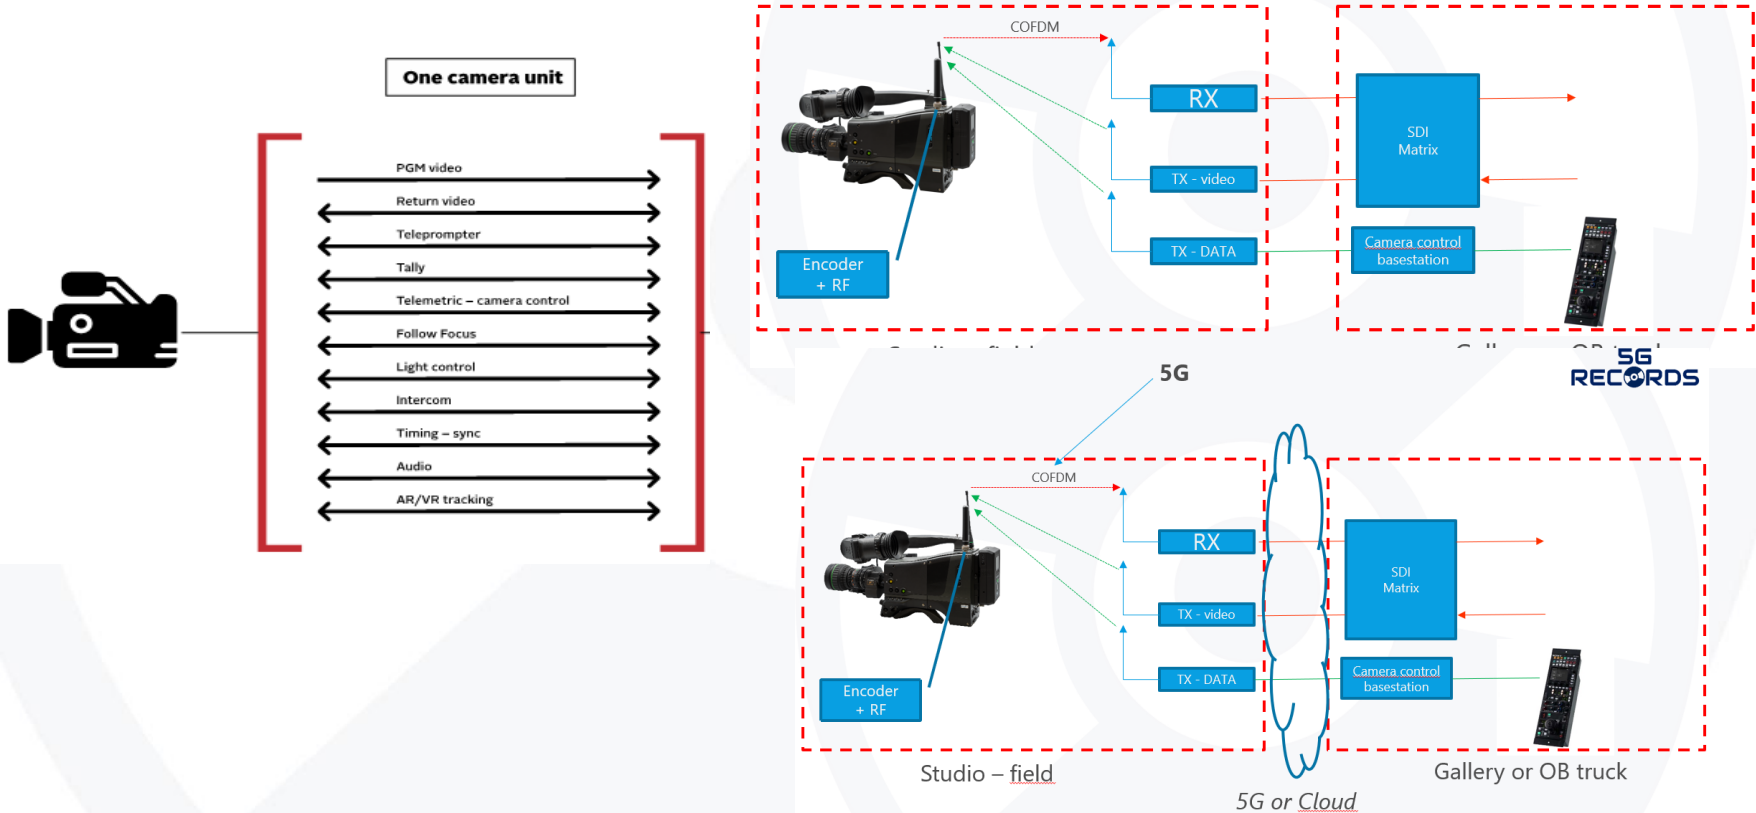

# UC2 Multiple wireless camera

---

- **Scenario 1: Wireless cameras within a production**
  - Exploring the substitution of COFDM technologies with 5G
- **Scenario 2: Remote production over 5G**
  - Equipment on the event premises <-> production team in the gallery
    - Racking, PTZ controls, intercommunication between the crews
- **Scenario 2: Remote contribution**
  - Going beyond current bonding-based solutions
- **Exploring cloud-based MCR**

# Traditional set-up to 5G enabled set-up

# Codecs assessment (latency, quality and bandwidth trade-off)

---

- NR Midband (3.8GHz) – 100MHz: around 120Mbps – 200Mbps (uplink)
- 4-5 «wireless» cameras 5G enabled: around 30/40 Mbps each; 1080p50
  - Codecs (standardized): H.264/**HEVC**
    - **JPEG-XS, VC2: at least 100Mbps**
  - Latency (enc +dec): from 30ms to 100ms depending from the configurations
    - normal latency: no restrictions on the GoP structure (I, P, B frames)  
→ reorder on the decoder side
    - Intra ONLY: given the available bit-rate, we expect poor quality
    - IPPP...IPPP : latency and quality to be checked
    - Frame divided in multiple slices: latency should improve, quality to be checked

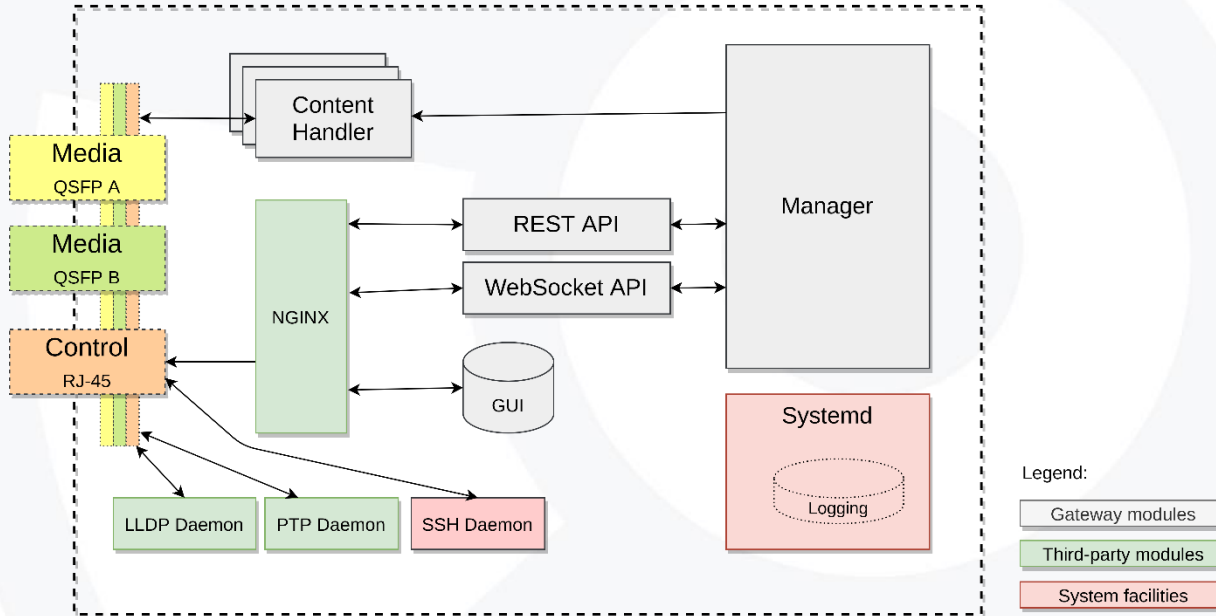

# UC2 Multiple wireless camera - KPI

## Remote production over 5G

Characteristic system parameter		Comment
Glass to Glass latency	20-150 ms	Latency from a image being captured by a camera to the point it becomes usable in a production gallery (discounting onward distribution)
Video uplink Data Rate	> 50 Mb/s	This is to allow high quality video . different compression algorithms may be deployed depending on the format of the video
Service area	1000m <sup>2</sup>	Typical small studio area
Mobility	≤10km/h	Support for walking speed or robotic mount
Number of Streams	Up to 5	
Jitter and latency	Constant	

.... more relaxed for the contribution scenario

# Media Gateway

## GATEWAY

RTP <-> ST2110

RTP <-> RIST

RIST <-> ST2110

RIST <-> RTP

# Media Gateway

The Gateway is composed of two major components:

- NVIDIA Jetson AGX Xavier Development Kit [NVIDIA-Xavier]
- NVIDIA BlueField-2 DPU [NVIDIA-BlueField-2]

# Next steps for UC2

---

- Studying/testing timing solutions for media production using 5G
- Lab tests in March @Aachen (Ericsson Lab)
  - Without the operational control layer and the gateway
- Testing the operational control layer and gateway before the end of the year
- Planning for live trials in 2022
- Interaction with 3GPP (and other SDOs)
  - **Study on Media Production over 5G NPN:** to identify standardization needs and potential standards gaps when using 5G NPN Systems for media production
